Fanny Bay 2nd Summer MARKET DAYS

SUNDAY AUGUST 2nd
9 a.m. - 2 p.m.

**Fanny Bay Community Hall,
7793 Island Highway South, Fanny Bay**

Crafts to Produce! Come One! Come All!

Outdoor Market with lots of space for distancing!

Opportunity to support local vendors

Space/table rental proceeds to support FB Community Hall

For Vendor Info contact: bevapowell@shaw.ca

A lot has happened since my previous article in the July issue of the Fanny Bay Flyer, and all of it has been good! Anyone who is a member of the Fanny Bay Hall or Fanny Bay Community Bulletin Board groups on Facebook, or has been following updates on the Fanny Bay Community Association website, knows that we conducted a highly successful fundraising campaign in July. Responding to a FBCA request for operational funding in lieu of their annual sponsorship of the "Live at Fanny Bay Hall" concert series, the Union Bay Credit Union pledged to match community donations up to \$2,000. This generated a huge amount of excitement within our small community, resulting in the FBCA meeting the mark at the end of just three days of fundraising! To date community members have donated \$3,970 towards the Hall, which results in a very impressive figure when added to the \$2,000 from UBCU.

The Finance Committee has been hard at work as well. Immediate and simple steps were recommended to reduce Hall expenses, such as unplugging the freezer and refrigerators in the kitchen, and turning off the hot water tank. We applied for and were approved for COVID-19 relief from BC Hydro, which waived our hydro charges for three months, a savings of \$267 to date. We also changed our telephone account with Telus, resulting in a savings of \$47/month.

Due to the hard work of Bev Powell, with assistance from Debby McRae, a very successful outdoor Market Day was held at the Hall on Saturday 4 July. Booth and table rental by the vendors raised \$920, and donations in lieu of an entrance fee raised an additional \$320. As well, Debby had 28 membership renewals, and sold 2 books and 2 T-shirts, all of which brings in precious revenue. I would also like to take this opportunity to thank Norma Shelley and her able assistant Roy Shields, who have raised \$563 for the Hall through the sale of home-made facemasks.

THE BUTCHER'S BLOCK
"Locally Owned and Operated Since 1985"

SUMMER BBQ PACK

- 4 pieces Teriyaki Beef Kabobs
- 6 - 1/4 lb store-made Patties
- 6 - Local Boneless Pork Chops, 3 Maui, 3 Plain
- 6 - Free Run Chicken Legs
- 2 - Free Run Bone-in Chicken Breasts, cut in half
- 4 - 8oz Grass Finished New York Steaks
- 4 - Salmon Patties
- 4 - Ready-to-Bake Baked Potatoes

\$120

**BOWSER LEGION
GARAGE SALE
SATURDAY**

Sept. 26th 10 -2 pm

*For Donations
to Garage Sale:*

Come to the
Legion Parking Lot
Saturday August 15th
10:00 – 2:00 p.m.

*This is the **ONLY TIME** that
items can be brought
to the Legion.*

Please don't forget about our second outdoor Market Day at the Hall, which will be held at 9 am – 2 pm on August 2nd. The FBCA will be there once again, happy to accept donations, renew memberships, and sell books and T-shirts. Come out and support our local vendors, who have also been hit hard by the COVID-19 economy.

Finally, I would like to give you a quick update on FBCA finances, though detailed financial statements will be available at our AGM in September. Thanks to the support of the Fanny Bay community and UBCU, I am currently projecting that the FBCA will be able to pay our estimated operational expenses until year-end, though with very little left over.

We will see what next year brings!

RAY KRAFT OF UNION BAY

is a Fanny Bay Salmonid Enhancement Society director and heads the group that oversees Hart-Washer Creek and a collection of smaller streams. Every year, the creek dries up and Ray leads the effort to rescue the stream's Coho fry and drive them to a summer-long respite at FBSES on Berray Road. That's a 40 km round trip with full buckets for a total of 1,000 kilometers in the summer of 2019 when 18,000 were saved and filled every tank FBSES could give them. The fry make the trip aerated by battery-powered air bubblers with a stop at Buckley Bay to check their health. For Ray, the reason for all the work of salvage is "a simple thing, not complicated; salmon not salvaged will die, and in general, as a society, we have screwed things up so much that if you can do something, it feels good." What Ray and friends have done is save about 61,000 salmon fry over the past nine years. Hart-Washer creek gets its name from its history. In the years of Union Bay's time as a coal port, roughly 1887 to 1950, its waters were dammed to create a reservoir, then washed the coal produced in the Cumberland mines that was loaded aboard ships. Today's Hart Creek is the result of all that history and enhancement efforts to restore it to life as a salmon stream. The most recent was a re-channeling in 2016 to end its habit of flooding the ball park, which was its original streambed.

A current project is waiting for work to be allowed to resume. Ray's health has made continued salvaging unwise, but he will be succeeded by a group now grown to ten members who can carry it on. Ray enjoyed being part of FBSES; he has "a lot of admiration" for all the FBSES members who fed and cared for fish he salvaged. For our part, as president Judy Ackinclose says, "we will all miss a very dedicated volunteer."

There is still room for more plant pots at the FBSES potting shed. John Phillips, left, and Lorraine Gardener are filling the current supply.

FBSES REPORT

And FBSES has something to ask of you; we'd like all your one-gallon plant pots and we will even pick them up. The pots are a key part of our tree nursery and over the years our trees have gone all over the island from Victoria to Port McNeill and from Ucluelet/Tofino to many groups on the east coast. At the end of tree planting seasons FBSESers' have taken donated silviculture 'plugs' and potted their bare roots into those specific plant holders full of rich black soil and fertilizer. We ensure they thrive and get a good start when they're replanted. And replanted they are. At the moment, 200 cedars, hemlocks and Douglas-firs are waiting to go to new homes around Colquitz Creek and the new MacKenzie Interchange for the Saanich Parks Department. There are 3500 more, mostly spoken for, that also include Sitka spruce, white pines and balsams. "Plugs" by the millions get fired into the ground on a piecework basis by tree planters, while ours get coddled and cared for under the direction of our Lorraine Gardener of Fanny Bay, with assistance from John Phillips of Qualicum Beach and other members. They are donated to us by the hundreds per box by outfits like Mosaic, Western Forest Products, provincial forestry nurseries and departments. For 20 years we've been doing this at a rate of about a thousand a year. That's a lot of pots and trees.

FBSES would like to recognize two local business owners who have done us and the salmon we are here for a big favour. Calvin Gregson of the Rosewall Pit Gravel Sales and Terry Lundberg of Meglet Transport teamed up to get 12 yards of basketball-size rocks to our Wilfred Creek Hatchery. Wilfred is getting some new concrete for its storage box and incubator building and its water supply is getting major clean-up and improvements where the creek feeds into our collection pond and side channel system. The donated rock and hauling is a generous help. Wilfred Creek is home to wild Pink, Chum and Coho spawners as well as our hatchery Pink and Coho. Team members Larry McDonald, Frank Lines, Helmuth Gieger and Rudi Spatzl are on the job.

PHASE 3 WATER PROJECT UPDATE

Phase 3 construction continues on schedule. The water mains throughout the Phase 3 zone have been installed and passed the pressure testing. The Victor Lane and Vivian Way section of the water main has been tied in to our distribution system, and the construction crew is currently switching over individual residential services to the new system. The remaining sections of the water main along Ships Point Road, the north loop of Baynes Drive and Wentle Way will be disinfected, flushed and tested soon. When lab tests confirm that these sections are safe, they will be tied into the distribution system, and residential service connections will commence in the remaining areas. After residential service connections are completed, disrupted roadways will be repaved and areas around the service boxes will be restored, followed by hydroseeding in September, when the weather is more conducive to new grass.

Residential service transfer takes about an hour to complete, and the water will be shut off at the individual residence during that time.

It is strongly recommended that residents **NOT** run taps or flush toilets while the contractors are making the service connection, as there's a likelihood that dirt and debris can be

SPID REPORT

pulled into the system while the water line is cut, which may result in blockages in homeowners' plumbing systems. When water service is restored, residents are

advised to run an outside tap closest to your water service box for several minutes to flush any sediment that may be in the line, to prevent any clogging of faucet screens inside the house.

Please reduce your speed to 30km/h throughout the entire construction zone north of Baynes Drive. Construction crews can be working throughout the construction zone at any time Monday-Saturday, 7:00am to 7:00 pm, and the numerous curves in our roads mean drivers can come upon workers in the roadway with little time to stop. Please keep the construction crews safe and reduce your speed.

Continue to keep an emergency supply of drinking water on hand in case of planned or emergency disruptions of water service. If you would like advanced notice of planned water disruptions, please contact our Administrator with your email address or phone no., 250-335-055 or shipspt1@shaw.ca. Alternatively, notice for planned outages will be posted on the mailbox bulletin boards.

SUMMER BURNING RESTRICTIONS

The Fire Danger Rating at time of publication is **High**, which means backyard open burning is *not allowed*. All burn permits that had previously been issued are *cancelled*, and the use of non-commercial or homemade fire pits is prohibited, as well as burn barrels, tiki torches and tiger torches.

Campfires are permitted in suitably sited, commercially approved devices. There are no restrictions on the use of propane firepits, regardless of the fire danger rating, as long as they are sited on a non-combustible surface, are CSA or UL rated and the flames are no taller than 15 cm (6").

See spid.ca for further details.

IT'S BEEN A GOOD YEAR FOR STRAWBERRIES

And now the raspberries are demanding attention. The ruby red flashes among the leaves remind us we need to get serious about picking them. And the blueberries are beginning to live up to their name, so it won't be long before they're ready for harvest. But this morning, before harvesting our backyard bounty, I have a different kind of harvesting to do, our semi-weekly trip into the woods to collect data on the health of our streams.

Today my sampling partner is Mark Lake, one of our newer members and a retired geophysicist. As we wait for the results of our turbidity test at Wilfred Creek I stare at the washed-out hill face that overlooks this particular sampling site. The different sized sand, gravel, and rock bits, which geologists call sedimentary units, form long layers known as beds. They give the cliff face a striped look but they're tilted at a steep angle. I always assumed this was a place where the ground had tilted up under a large tectonic force but Mark explains that the layers are too new for that. Instead, the angled beds are simply a function of how the river deposited its suspended materials over thousands of years.

Photo credit: Lynne Ray

Our conversation quickly morphs into a basic lesson on how aquifers work and how one goes about measuring them. An aquifer, for our purposes, can be thought of as a large container. The beds of gravel at Wilfred Creek are really good at holding water. They have high porosity and permeability. On the other hand, the exposed shale at Buckley Bay, where the road goes up to the new highway, acts as a barrier to the easy flow of water. It has low porosity and permeability. These kinds of features define an aquifer.

But determining the features of an aquifer is only part of the story. That is why we regularly harvest data from several local wells, monitoring their water level during the course of the year. This, ultimately, gives us a glimpse into how full the "container", (our aquifer) might be.

As we make our way along the trail to Cowie Creek, the next stop on our sampling route, I'm again reminded of my unpicked berries back home: the trail is dotted with huckleberry bushes, their branches drooping under the weight of a bumper crop. And me without a bucket! The sight and taste of the huckleberries reminds me of my grandma's pies, one of the joys of my childhood. But it also reminds me we need to be alert for bears. There are other creatures out here intent on harvesting too.

by Mike Mesford

THANK-YOU TO ROXANNE AND THE FANNY BAY INN

for their kind donation to the Fanny Bay Fire Department. This donation, from the weekly Tweekie Draw held each Thursday, will go towards a replacement Thermal Imaging Camera. Our previous unit was destroyed at a fire on Ships Point earlier this year.

Mike Smith, Fire Chief

SHIPS POINT LAUNCH The Joy Ride

A hot and lazy August afternoon found Stanley sleeping behind a log at Ships Point Park. He could hear the quiet lap of the waves and feel the gentle breeze that barely ruffled the fur on his back. Peace.

Two people settled on the log. The scent of skunk cabbage and talk of a joy ride piqued his interest. As soon as they left Stanley pulled his Miriam and Webster out of his back pocket. The description filled Stanley with excitement and a sense of purpose. Maybe later. For now he sighed, laid on his back, all four paws up and admired the puffy white clouds overhead. Cool.

Back down on earth Stanley headed for the top of Tozer Rd. A grey van was parked on the road and facing the downslope. He pawed the door open, put his shoulder hard against the doorjamb and pushed. It moved slowly and Stanley jumped in. He didn't know he had company. Donny was in the back of his van, under the covers and sleeping it off.

Stanley stood with his back legs on the seat and paws on the steering wheel. The van moved slowly at first, then picked up speed alarmingly fast and began to tear down Tozer. It broadsided a telephone pole and Donny was jarred out of his stupor. He grabbed the driver headrest and looked in the rear view mirror at the same time Stanley did. Both yelped! With both rockets firing the van picked up speed and charged to the bend in the road. From the back seat an incredulous Donny yelled 'LEFT! LEFT! GO LEFT!!!' Stanley had no idea what left was but Donny had his arm out Stanley's window and was leaning hard that way so Stanley did too. The van barreled along Tozer and bounded onto the dyke. Wendy was walking her dog and they were forced into the bushes. Stanley leaned out the open window and barked furiously at Tyson.

Donny recognized the editor of the Fanny Bay Flyer and ducked down behind the front seat. Word gets around!

Stanley felt a sense of excitement and joy. So this is a joy ride! He stuck his head out the window and howled. Up ahead the fork in the path was coming up in seconds. Stanley looked back at Donny and barked 'which way?' Again Donny yelled 'LEFT, GO LEFT YOU CRAZY DOG!'

Stanley cranked the van over hard and they reeled onto the overgrown pathway. Not far down the path there is an old yellow crane in the bushes. That is where the joy ride finally stopped. Stanley looked back to see if Donny was alright. He had passed out after the last wild turn and now looked quite comfortable wedged against the back doors. Don't drink and drive.

Stanley forced the smashed door open and staggered onto the path. He followed his nose to Ships Point Road and back to the safety of the log on the beach. Exhausted, he flopped down and a thought came into his bony head. The skunk cabbage. Did he dream all this? As he rolled over the van keys slipped out of his pocket and were buried in the sand under the log. And gone forever.

So was this real, a dream or just an experience lost in the sands of time?

LIVING WILD

With forest farming, we do our best to live harmoniously with the environment around us, but sometimes instincts take over and force our hand to intervene. Sometimes what you know is inevitable, is just not acceptable.

Previously, I had hatched out hundreds of chicks of various chicken breeds, but I thought I would try something new. I purchased some turkey hatching eggs to start my very own turkey flock. Turkeys are much more capricious and require exact humidity, ventilation, time and temperature levels for a successful hatch.

At two weeks in, I candled the eggs by putting a bright flashlight behind them one at a time and found out most of them were not fertilized. I was still hopeful to get a few baby turkeys though, so I kept the few that looked like there were possibilities.

Two weeks later, a total of 28 days, I heard my first pip! It was so loud – much louder than chickens – and it went on for hours. Until about 12 hours passed, and the pipping stopped. Turkeys can take up to 24 hours from first pip to hatch, but something didn't seem right.

Now the general rule of thumb is that you never open the incubator, and you most certainly never help a chick hatch out of the shell. They say if it is not strong enough to hatch, there is usually something else wrong with it – bad genetics. The business part of farming has no flexibility for weak livestock, but our compassion comes first with all of our animals.

After another 2 hours of no pipping, I could not stand to wait any longer. I realized that there would be no other hatches, and as much as I wanted it to hatch on its own, I did not want this little life suffering unnecessarily.

Torn between what you are supposed to do, and what I felt I had to do, I picked up the egg, and realized that it

had dried to its shell and there would be no chance of escape. The poor thing was exhausted.

It was breathing, but barely. Slowly, I picked pieces off the shell, trying to give it some relief. It started pipping like crazy, like I was setting it free. Finally, the little turkey had hatched! Unfortunately it looked injured with crooked legs and toes.

At this point, I wasn't sure if my intervention was causing more harm than good. I didn't want to give up, but I did not want any life to suffer. It would lie on its back and kick its legs, but would not stand up. The breeder told me that it usually takes 2-3 hours before they are walking around. The internet unanimously stated that it should walk in a maximum of 24 hours, and over 40 hours had passed. Despite my trying to stand it up and make it stronger, the little turkey would always flop onto its back with crooked toes kicking the air. The verdict was grim.

Feeling responsible for this little life in front of us, we spent the following two days teaching that little tiny turkey how to stand and how to walk. We showed it how to eat, and by the end of the second day, its toes had straightened and it could run in a straight line! It actually comes when you call it now, and it will jump into your hand for a cuddle. Happy and healthy as can be, it is growing and running around so fast!

Just when we thought the only option was to let nature take its course and give up, we persevered and beat the odds. So humbling to be gifted an experience to remind us how fortunate we are.

Meet Cranberry, the newest addition to the Van Isle Wild family.

FANNY BAY NATURALLY

Babies, babies everywhere! We had a nest of baby towhees in the wild area of our back yard this summer. Chickadees set up camp in one of our birdhouses and tree swallows in the other. A squirrel has been visiting the bird feeder frequently, her swollen mammary glands evidence of babies awaiting mom's return.

But I digress....what I really want to write about are bald eagle babies. There is a nest high up in a very tall old tree, visible from a trail that I have walked nearly every day for the past eight years. For the first six years, I was oblivious to the nest's existence - it was by pure chance that I stopped at the only point on the trail that the nest can be seen from, and happened to look up through a tangle of well-branched trees in just the right direction. Since then I have made a point of stopping to look every time I pass by.

Bald eagles mate for life (the average lifespan for bald eagles in the wild is 20 years, with the oldest confirmed at 38 years), only acquiring a new mate if one dies or otherwise disappears. And the lifelong commitment doesn't stop there. After the pair choose a suitable nesting site, they turn their attention to building a nest, a framework of sticks lined with grass and/or feathers that they will potentially use for their entire lives. However, despite annual refurbishments prior to each breeding season, most nests last less than five years - some collapse in storms or the supporting branches break due to the increasing weight of the nest.

A female bald eagle lays one to three eggs a year. The male and female take turns sitting on the eggs while the other hunts for food, but the female does most of the incubating. The eggs hatch at about 35 days.

A young eaglet can gain up to 170 grams a day (it takes human babies a week to gain the same!), the fastest growth rate of any North American bird. Young eaglets keep themselves busy manipulating sticks and playing tug of war

with their nestmates. By eight weeks of age, they are able to flap their wings, lift their feet off the nest platform, and rise up in the air. Some fledge (i.e. are able to fly from the nest) at this time, while others hang on until 14 weeks of age.

THE FANNY BAY INN HAS HAD GREAT SUCCESS; patrons have had fun and many local non-profit organizations groups have benefitted from the fun weekly "TWOONIE DRAW".

Drop in anytime and register for your own personal number. Pay a Twoonie once a week to enter that number in the weekly draw. All 'paid for' numbers become valid for the weekly draw held at **6pm on Thursdays**. The winner receives half the pot while the balance is given to a local group.

Next on Roxanne's list is the Ships Point Volunteer Fire Dept.

Fledged eaglets stay close to the nest, looked after by their parents, for a further six weeks. Once they gain independence, they range widely until they attain adult plumage (the iconic white head of both the male and the female) and are reproductively mature, at the age of four or five years. They then go about finding a mate, and then a nesting site, and the cycle begins anew.

I was elated to see a pair of adult eagles on the nest at the end of March last year, and come July, two eaglets were visible. This spring, I did not see any activity in or around the nest and feared it had been abandoned until, much to my surprise, a lone eaglet made an appearance a few weeks ago. When I discovered, through research, just how large and deep an eagle's nest can be, it is no wonder that the nest appeared to be vacant until July!

The bald eagle nest is the largest of any North American bird, up to four metres deep and almost three metres wide, and weighing up to a tonne. A

bald eagle nest in Florida is on record as the largest tree nest ever recorded for any animal, at just over six metres deep and close to three metres across, and weighing 2.7 metric tonnes!

As with most wildlife, the main threats to bald eagles are caused by humans - loss of habitat due to deforestation and shoreline development, as well as pesticides accumulated through the food chain. Bald eagle nests are protected throughout the year under BC's Wildlife Act. As well, most regional districts on the Island, including Comox Valley, have restrictions and special conditions for development permits for properties with bald eagle nests and habitat.

Watch for more interesting facts about this iconic bird in the next issue!

SHINGLES & SHELLS - A History of Fanny Bay, by Arv Olson

Second Edition \$35 promotions@fannybaycommunity.com

WE ARE LOOKING FORWARD

to another fun Market Days to be held Sunday, August 2nd on the Fanny Bay Hall grounds. The Fanny Bay Seniors will be running our concession again providing hot dogs, chips, cookies and cold drinks. We invite you to come and say hi and enjoy our hospitality.

Our renters are back and enjoying their activities and some are holding their meetings outside to enjoy the nice weather.

Pam and Lise have been working hard to make our memorial gardens look like new. Thank you ladies the gardens look wonderful.

Happy August Birthday to: Marg Carr,
Felomina Cunningham, Fernando Hormazabal,
Clayton Hutchings, Curt Johnson.

HAPPY BC DAY EVERYONE!!

by Linda Tournemille

The Fanny Bay Flyer is published monthly (except January) by the **Fanny Bay Community Association [FBCA]**, a non-profit society and registered charitable organization.

Opinions expressed in the Flyer are not necessarily those of the FBCA or the editor. While every effort is made to ensure the accuracy of the Flyer's content, neither the Association nor the Editor assume responsibility for any misprints or errors, which may appear in the information given and printed within. Submit camera ready artwork - jpg, gif, tiff - or inquires to flyer@fannybaycommunity.com

The FBCA Board of Directors will promote activities that enhance the quality of life for Fanny Bay residents.

The Board seeks community input, invites participation, encourages the use of the Fanny Bay Hall as a place to gather, share, foster and deepen the sense of community while maintaining the existing structure in good condition.

The FBCA gratefully acknowledges the support of the Province of BC through a Community Gaming Grant which enables the delivery of low cost programs & activities.

PICKLEBALL UPDATE

Both leagues are playing regular schedules, as noted above, on the outdoor court except for a few who aren't playing due to personal choice regarding the risk of Covid-19. Precautions are being put in place for safety.

We're hoping that we will be able to move back indoors when the Fall rains return, but we'll have to see what things look like at that time.

AEROBICS was able to do outdoor classes for the month of June. As usual. no classes for the summer. See you in September.
